Take-A-Number Please

TAKE-A-NUMBER SYSTEMS eliminate fears of not being served in turn. Over 99,000 TAKE-A-NUMBER SYSTEMS are successfully in use by retailers, government, hospitals, airlines, banks, and wherever people wait for service. TAKE-A-NUMBER SYSTEMS are the positive and confident way to serve people. Faster service means happier customers and clerks. Reduced costs... Higher profits.

The award winning Failsafe ticket dispenser has no moving parts and only requires one smooth pull on the ticket from any direction. Simplified loading of tickets take only seconds.

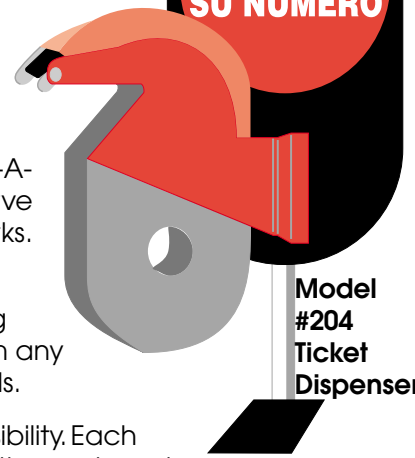

Our number indicators are designed for over 90 feet visibility. Each indicator has a 12 month limited warranty against defective parts and workmanship. Each of our indicators is more than suitable for routine sequential operation. The housings and physical numerals differ in appearance. If you have special requirements call us and we will design an indicator to fit your needs.

SPECIAL APPLICATION GROUP

RANDOM ACCESS and 3 DIGIT NUMBER INDICATOR RANDOM ACCESS

Non-sequential operation. A separate key pad allows you to enter any number at any time, in any order.

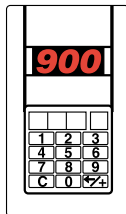

3 DIGIT NUMBER INDICATOR

Allows sequential operation for situations that demand rapid, heavy turnover of customers. Designed to use with tickets #0201-3.

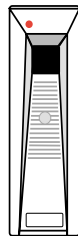

RANDOM ACCESS KEY PAD

Random Access Key Pad will enter numbers in any sequence.

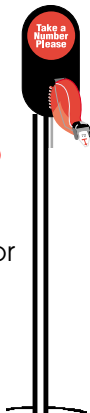

WIRELESS PUSH-BUTTON CONTROL

In situations where it is difficult to run wires from the L.E.D. number indicator to the push-button (e.g.: on island counters) this is the answer.

TICKET DISPENSER STAND #214

5½ foot high portable stand for Take-A-Number dispenser.

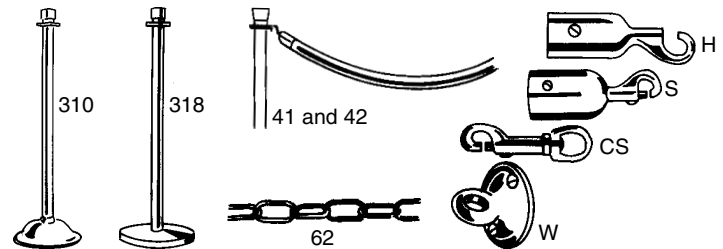

#101 - THE COMMANDER (#1001-22 Package)

- #CS **CHAIN SNAP**
- #W **WALL PLATE:** polished or satin finished chrome.

THE "501" PAGING SYSTEM

L.E.D. NUMBER SYSTEM

2 or 3 Digit Number Display with or without directional arrows

The "501" remote control Paging System combines a Number System with Single Line service adding extra speed to the service operation.

With the "501" System there will always be the same number of customers in the Single Line as there are service persons at the counter or desks.

To activate the "501" System a service person simply presses the control switch and the following will occur:

A: the "501" panel number will change, a chime will ring, and the display GO TO SINGLE LINE will light up. Optional arrows work with GO TO display. GO TO display will shut off after 2, 4, 6, or 8, seconds as selected by you. The number will remain until contacted by a service person.

B: the service light will turn on at the same time as the panel and will automatically shut off after 8 seconds or longer as specified when ordering. A second switch can be activated to turn on the service light before it shuts off.

In working with this system, tickets can be handed out by a service person at the information desk or through a stand alone ticket dispenser.
